

“The Graying of HIV”

“An Aging and

Growing Population”

Wednesday, March 3, 2010

By 2015, older adults will constitute 50% of the overall population of people living with HIV/AIDS. It is important that health professionals who provide clinical care and treatment are current and informed about managing HIV/AIDS in the older patient.

This full day symposium will address the clinical issues of managing HIV in the Older Patient.

Topics to include:

- Epidemiology
- Treatment
- Comorbidities (cardiovascular, renal, diabetes)
- Substance Use and Mental Health
- Health Literacy
- CDC Testing Recommendations
- Targeted Prevention

8:00AM – 4:00PM
The Conference Center
